Twelve cases of various urinary infections were  
observed, 3 of which were eliminated at the outset  
as renal tuberculosis was involved. In almost all  
cases the infection was caused by *E. coli*, cases also  
existing of combination of paracoli and *Proteus* orga-  
nisms. The duration of treatment was 10 days on an  
average. Although the number of cases was small,

The possibilities of reducing the time lag of the change  
of temperature signal for superheated steam were  
investigated on a boiler type TP-230-2. Attention was  
confined to the basic factors governing the time-lag  
of the step change signal: time lag due to the super-  
heater itself, time lag due to the detecting element and
